Welcome Message from the NBiS-2019 Steering Committee Co-Chairs

Welcome to the 22-nd International Conference on Network-Based Information Systems (NBiS-2019), which will be held at Oita University, Japan from September 5 to September 7, 2019.

The main objective of NBiS is to bring together scientists, engineers, and researchers from both network systems and information systems with the aim of encouraging the exchange of ideas, opinions, and experiences between these two communities.

NBiS started as a workshop and was held for 12 years together with DEXA International Conference as one of the oldest among DEXA Workshops. The workshop was very successful and in 2009 edition the NBiS was held at IUPUI, Indianapolis, USA as an independent International Conference supported by many international volunteers. In following years, the NBiSs was held in Takayama, Gifu, Japan (2010), Tirana, Albania (2011), Melbourne, Australia (2012), Gwangju, Korea (2013), Salerno, Italy (2014), Taipei, Taiwan (2015), Ostrava, Czech Republic (2016), Toronto, Canada (2017) and Bratislava, Slovakia (2018).

In this edition of NBiS, many papers were submitted from all over the world. They were carefully reviewed and only high quality papers will be presented during conference days. In conjunction with NBiS-2019 are held also 8 International Workshops where specific and hot topics are deeply discussed.

Many volunteer people have kindly helped us to prepare and organize NBiS-2019. First of all, we would like to thank General Co-Chairs, Program Committee Co-Chairs and Workshops Co-Chairs for their great efforts to make NBiS-2019 a very successful event. We would like to thank all NBiS-2019 Organizing Committee Members, Program Committee Members and other volunteers for their great help and support. We have special thanks to Finance Chair, Web Administrator Co-Chairs and the Local Organization Team at Oita University, Japan for their good arrangements. Welcome Message from NBiS-2019 General Co-Chairs

We would like to welcome you to the 22-nd International Conference on Network-Based Information Systems (NBiS-2019), which will be held at Oita University, Japan from September 5 to September 7, 2019.

It is our honour to chair this prestigious conference, as one of the important conferences in the field. Extensive international participation, coupled with rigorous peer reviews, has made this an exceptional technical conference. The Technical Program and Workshops add important dimensions to this event. We hope that you will enjoy each and every component of this event and benefit from interactions with other attendees.

Since its inception, NBiS has attempted to bring together people interested in information and networking, in areas that range from the theoretical aspects to the practical design of new network systems, distributed systems, multimedia systems, Internet/web technologies, mobile computing, intelligent computing, pervasive/ubiquitous networks, dependable systems, semantic services, Grid, P2P, and scalable computing. For NBiS-2019, we have continued these efforts as novel networking concepts emerge and new applications flourish. NBiS-2019 consists of the main conference and 8 workshops. We received 120 papers, and out of them 30 were accepted (25% acceptance ratio), which will be presented during the conference days.

The organization of an international conference requires the support and help of many people. A lot of people have helped and worked hard for a successful NBiS-2019 technical program and conference proceedings. First, we would like to thank all the authors for submitting their papers. We are indebted to Track Co-Chairs, Program Committee members and reviewers who carried out the most difficult work of carefully evaluating the submitted papers.

We would like to give our special thanks to Prof. Leonard Barolli and Prof. Makoto Takizawa the chairs of the Steering Committee for giving us the opportunity to hold this conference and for their guidance on organizing the conference. We would like to thank Program Committee Co-Chairs and Workshops Co-Chairs for their excellent work. Welcome Message from the INCoS-2019 Organizing Committee

Welcome to the 11-th International Conference on Intelligent Networking and Collaborative Systems (INCoS-2019), which is held from 5-th to 7-th September 2019 at Oita University, Japan.

INCoS is a multidisciplinary conference that covers latest advances in intelligent social networks and collaborative systems, intelligent networking systems, mobile collaborative systems, secure intelligent cloud systems, etc. Additionally, the conference addresses security, authentication, privacy, data trust and user trustworthiness behaviour, which have become crosscutting features of intelligent collaborative systems. With the fast development of the Internet, we are experiencing a shift from the traditional sharing of information and applications as the main purpose of the networking systems to an emergent paradigm, which locates people at the very centre of networks and exploits the value of people's connections, relations and collaboration. Social networks are playing a major role as one of the drivers in the dynamics and structure of intelligent networking and collaborative systems.

Virtual campuses, virtual communities and organizations strongly leverage intelligent networking and collaborative systems by a great variety of formal and informal electronic relations, such as business-to-business, peer-to-peer and many types of online collaborative learning interactions, including the virtual campuses and eLearning and MOOCs systems. Altogether, this has resulted in entangled systems that need to be managed efficiently and in an autonomous way. In addition, the conjunction of the latest and powerful technologies based on Cloud, mobile and wireless infrastructures are currently bringing new dimensions of collaborative and networking applications a great deal by facing new issues and challenges. INCoS-2019 conference paid a special attention to Cloud Computing Services, Storage, Security and Privacy, Data Mining, Machine Learning and Collective Intelligence, Cooperative Communication and Cognitive Systems, Management of Virtual Organization and Enterprises, Big Data Analytics, eLearning, Virtual Campuses and MOOCs, among others.

The aim of this conference is to stimulate research that will lead to the creation of responsive environments for networking and, at longer-term, the development of adaptive, secure, mobile, and intuitive intelligent systems for collaborative work and learning.

This edition the conference received 107 submissions and based on the review results, we accepted 30 regular papers (28% acceptance ratio). Additionally, five workshops were organized in conjunction with the conference.

The successful organization of the conference is achieved thanks to the great collaboration and hard work of many people and conference supporters. First and foremost, we would like to thank all the authors for their continued support to the conference by submitting their research work to the conference, for their presentations and discussions during the conference days. We would like to thank TPC members and external reviewers for their work by carefully evaluating the submissions and providing constructive feedback to authors. We would like to thank the track chairs for their work on setting up the tracks and the respective TPCs and also for actively promoting the conference and their tracks. We would like to appreciate the work of PC Co-chairs and Workshops Co-Chairs for the successful organization of workshops in conjunction with main conference.

We would like to acknowledge the excellent work and support by the International Advisory Committee. Our gratitude and acknowledgment for the conference keynotes for their interesting and inspiring keynote speeches.

We greatly appreciate the support by Web Administrator Co-Chairs and the local organizing committee from Oita University, Japan, for excellent arrangements for the conference. We are very grateful to Springer as well as several academic institutions for their endorsement and assistance.

Finally, we hope that you will find these proceedings to be a valuable resource in your professional, research and educational activities!

NBiS-2019 & INCoS-2019 Keynote I

Prof. Yoshihiro Okada, Kyushu University, Japan

3D Graphics Applications for Education and Visualization

Abstract: In this talk, Prof. Okada introduces his research activities about 3D graphics applications. He has been studying development environments for 3D graphics applications since 1993. In 1995, he and his laboratory professor proposed a development system for 3D graphics applications called IntelligentBox. In the first half of this talk, he introduces IntelligentBox and its several example applications especially for education and visualization. As education applications, there are a collaborative dental training system, Tai Chi-based physical therapy game and so on. As visualization applications, there are a room layout system, Time-tunnel: a visual analytics tool for multi-dimensional data, Treecube: a visualization tool for browsing 3D multimedia data, and so on. Currently, Prof. Okada works as a director of ICER(Innovation Center for Educational Resources) of Kyushu University. In the second half of this talk, he introduces development activities of ICER for e-learning materials using 3D graphics and VR/AR, e.g., web-based interactive educational materials for Japanese history and IoT security, and serious games for medical education.

NBiS-2019 & INCoS-2019 Keynote II

Prof. Tarek Saadawi, City University of New York, USA

Secure Resilient Edge Cloud Designed Network

Abstract: IoT systems have put forth new requirements in all aspects of their existence: a diverse QoS requirements, resiliency of computing and connectivity, and the scalability to support massive number of end devices in a plethora of envisioned applications. The trustworthy IoT/cyber physical system (CPS) networking for smart and connected communities will be realized by distributed secure resilient Edge Cloud (EC). This distributed EC system will be a network of geographically distributed EC nodes, brokering between end-devices and Backend Cloud (BC) servers. This paper addresses three main topics in secure resilient cloud designed network; 1) resource management in mobile cloud computing; 2) information management in dynamic distributed databases; 3) biological-inspired intrusion detection system (IDS). A focus in the presentation will be on the biological-inspired (IDS).

NBiS-2019 & INCoS-2019 Keynote III

Prof. JongWon Kim, Gwangju Institute of Science & Technology, South Korea

Container-leveraged Service Realization Challenges for Cloud-native Computing

Abstract: Cloud-native computing, employing container-based microservices architecture, is accelerating its adoption for agile and scalable service deployment over worldwide multi-cloud infrastructure. In order to transparently enable diversified inter-connections for container-based cloud-native computing, by leveraging SDN/NFV technology, we need to tie distributed IoT things through multi-site edge clouds to hyper-scale core clouds. Thus, in this talk, we first attempt to relate the open-source-driven development for CNI (Container Networking Interface) and CSI (Container Storage Interface) to the required container-enabled cloud-native computing/storage with end-to-end (i.e., IoT-SDN/NFV-Cloud) inter-connections. Then, selected container-leveraged service realization challenges such as multi-tenant/multi-cluster Kubernetes orchestration, pvc(physical+virtual+containerized) harmonization, kernel-friendly accelerated and secured networking, and network-aware service meshes will be briefly discussed.
