### **Message from the NBiS-2017 Steering Committee Co-Chairs**

Welcome to the 20-th International Conference on Network-Based Information Systems (NBiS-2017), which will be held at Ryerson University, Canada from August 24 to August 26, 2017.

The main objective of NBiS is to bring together scientists, engineers, and researchers from both network systems and information systems with the aim of encouraging the exchange of ideas, opinions, and experiences between these two communities.

NBiS started as a workshop and was held for 12 years together with DEXA International Conference as one of the oldest among DEXA Workshops. The workshop was very successful and in 2009 edition the NBiS was held at IUPUI, Indianapolis, USA as an independent International Conference supported by many international volunteers. In following years, the NBiSs was held in Takayama, Gifu, Japan (2010), Tirana, Albania (2011) Melbourne, Australia (2012), Gwangju, Korea (2013), Salerno, Italy (2014), Taipei, Taiwan (2015) and Ostrava, Czech Republic (2016).

In this edition of NBiS, many papers were submitted from all over the world. They were carefully reviewed and only high quality papers will be presented during conference days. In conjunction with NBiS-2017 are held also 8 International Workshops where specific and hot topics are deeply discussed.

Many volunteer people have kindly helped us to prepare and organize NBiS-2017. First of all, we would like to thank General Co-Chairs, Program Co-Chairs and Workshops Co-Chairs for their great efforts to make NBiS-2017 a very successful event. We would like to thank all NBiS-2017 Organizing Committee Members, Program Committee Members and other volunteers for their great help and support. We have special thanks also to Finance Chair and Web Administrator Co-Chairs. Finally, we thank the Local Organization Team at Ryerson University, Canada for their good arrangements.

We do hope that you will enjoy the conference and have a good time in Toronto, Canada.

### **Welcome Message from NBiS-2017 General Co-Chairs**

We would like to welcome you to the 20-th International Conference on Network-Based Information Systems (NBiS-2017), which will be held at Ryerson University, Canada from August 24 to August 26, 2017.

It is our honour to chair this prestigious conference, as one of the important conferences in the field. Extensive international participation, coupled with rigorous peer reviews, has made this an exceptional technical conference. The Technical Program and Workshops add important dimensions to this event. We hope that you will enjoy each and every component of this event and benefit from interactions with other attendees.

Since its inception, NBiS has attempted to bring together people interested in information and networking, in areas that range from the theoretical aspects to the practical design of new network systems, distributed systems, multimedia systems, Internet/web technologies, mobile computing, intelligent computing, pervasive/ubiquitous networks, dependable systems, semantic services, Grid, P2P, and scalable computing. For NBiS-2017, we have continued these efforts as novel networking concepts emerge and new applications flourish. NBiS-2017 consists of the main conference and 8 workshops. We received 193 papers, and out of them 53 were accepted (about 27% acceptance ratio), which will be presented during three days of the conference.

The organization of an international conference requires the support and help of many people. A lot of people have helped and worked hard for a successful NBiS-2017 technical program and conference proceedings. First, we would like to thank all the authors for submitting their papers. We are indebted to Track Co-Chairs, Program Committee members and reviewers who carried out the most difficult work of carefully evaluating the submitted papers.

We would like to give our special thanks to Prof. Leonard Barolli and Prof. Makoto Takizawa the chairs of the Steering Committee for giving us the opportunity to hold this conference and for their guidance on organizing the conference. We would like to thank Program Co-Chairs and Workshops Co-Chairs for their excellent work. We would like to express our great appreciation to our keynote speakers for accepting our invitation as keynote speakers of NBiS-2017.

We would like to thank the Local Arrangements Chairs and Local Organization Team at Ryerson University, Canada for making good local arrangements for the conference.

We hope that you have an enjoyable and productive time during this conference, and have a great time in Toronto, Canada.

## Welcome Message from the INCoS-2017 Organizing Committee

Welcome to the 9th International Conference on Intelligent Networking and Collaborative Systems (INCoS-2017), which is held from 24th to 26th September 2017 at Ryerson University, Toronto, Canada.

INCoS is a multidisciplinary conference that covers latest advances in intelligent social networks and collaborative systems, intelligent networking systems, mobile collaborative systems, secure intelligent cloud systems, etc. Additionally, security, authentication, privacy, data trust and user trustworthiness behaviour has become crosscutting features of intelligent collaborative systems. With the fast development of the Internet, we are experiencing a shift from the traditional sharing of information and applications as the main purpose of the Web to an emergent paradigm, which locates people at the very centre of networks and exploits the value of people's connections, relations and collaboration. Social networks are also playing a major role in the dynamics and structure of intelligent Web-based networking and collaborative systems.

Virtual campuses, virtual communities and organizations strongly leverage intelligent networking and collaborative systems by a great variety of formal and informal electronic relations, such as business-to-business, peer-to-peer and many types of online collaborative learning interactions, including the emerging e-learning systems. This has resulted in entangled systems that need to be managed efficiently and in an autonomous way. In addition, latest and powerful technologies based on Grid and wireless infrastructure as well as Cloud computing are currently enhancing collaborative and networking applications a great deal but also facing new issues and challenges. Well-known social networks lack of knowledge management and adaptive solutions and the information shared among peers is rather static. INCoS-2017 conference paid a special attention to security, privacy and trust in Social networking, Cloud Computing Services and Storage, Organization, Management and Autonomic Computing, Hidden Complex Networks Resource Management and Optimization, etc.

The principal aim of this conference is to stimulate research that will lead to the creation of responsive environments for networking and, at longer-term, the development of adaptive, secure, mobile, and intuitive intelligent systems for collaborative work and learning. INCoS-2017 addressed a large number of themes and focuses on the following research tracks:

- Data Mining, Machine Learning and Collective Intelligence
- Fuzzy Systems and Knowledge Management
- Grid And P2P Distributed Infrastructure for Intelligent Networking and Collaborative Systems
- Nature's Inspired Parallel Collaborative Systems
- Security, Organization, Management and Autonomic Computing for Intelligent Networking and Collaborative Systems
- Wireless and Sensor Systems for Intelligent Networking and Collaborative Systems
- Service-based Systems for Enterprise Activities Planning and Management
- Big Data Analytics for Learning, Networking and Collaborative Systems
- Cloud Computing: Services, Storage, Security and Privacy
- Intelligent Collaborative Systems for Work and Learning, Virtual Organization and Campuses
- Social Networking and Collaborative Systems
- Intelligent Sensor Networks for Environmental Monitoring

As in all previous editions, INCoS-2017 counted on with the support and collaboration of a large and internationally recognized TPC covering all main themes of the conference. After a careful peer review process, in which each paper was reviewed by at least two referees (in average three reviews per submission), there were accepted 35 regular papers (30% acceptance rate). Additionally, four workshops were organized in conjunction with the conference, in which 24 workshop papers were accepted.

The successful organization of the conference is achieved thanks to the great collaboration and hard work of many people and conference supporters. First and foremost, we would like to thank all the authors for their continued support to the conference by submitting their research work to the conference, for their presentations and discussions during the conference days. We would like to thank TPC members and external reviewers for their work by carefully evaluating the submissions and providing constructive feedback to authors. We would like to thank the track chairs for their work on setting up the tracks and the respective TPCs and also for actively promoting the conference and their tracks. We would like to appreciate the work of PC Co-chairs and Workshops Co-Chairs for the successful organization of workshops in conjunction with main conference.

We would like to acknowledge the excellent work and support by the International Advisory Committee. Our gratitude and acknowledgment for the conference keynotes, Dr. Ann Cavoukian, Ryerson University, Canada and Prof. Shahrokh Valaee, University of Toronto, Canada, for their interesting and inspiring keynote speeches.

We greatly appreciate the support by Web Administrators Shinji Sakamoto, Yi Liu, Donald Elmazi and Miralda Cuka, Fukuoka Institute of Technology (FIT), Japan and Finance Chair Makoto Ikeda, Fukuoka Institute of Technology (FIT), Japan.

We would like to give special thanks to the members of the local organizing committee from Ryerson University, Toronto, Canada for excellent arrangements for the conference.

We are very grateful to Springer as well as several academic institutions for their technical sponsorship, endorsement and assistance.

Finally, we hope that you will find these proceedings to be a valuable resource in your professional, research and educational activities!

We wish you will enjoy your stay in Toronto, Canada and look forward to seeing you again in forthcoming edition of INCoS conference!

## NBiS-2017 & INCoS-2017 Keynote I

**Dr. Ann Cavoukian, Ryerson University, Canada**

### **Network and Information Systems Need to Embed Privacy & Security, by Design**

**Abstract:** Privacy is under siege. With the growth of ubiquitous computing, online connectivity, social media, and wireless and wearable devices, people are being led to believe they have no choice but to give up on privacy. Not so! Dr. Cavoukian will outline a privacy framework called Privacy by Design that will enable our privacy and our freedom, to live now and well into the future. While some believe that fundamental privacy protections will be challenged by the operation of Big Data and the Internet of Things, Dr. Cavoukian dispels the notion that privacy acts as a barrier to data analytics and the innovations they can spark. She argues that the limiting paradigm of “zero-sum” – that you can either have privacy or innovation, but not both – is an outdated, win/lose model of approaching the question of privacy in the age of Big Data, IoT, Network, and Information Systems. Instead, a “positive-sum” solution is needed in which the interests of both sides may be met, in a doubly-enabling, “win-win” manner through Privacy by Design (PbD). PbD is predicated on the rejection of zero-sum propositions by proactively identifying the risks and embedding the necessary protective measures into the IT and data architecture involved. Dr. Cavoukian will demonstrate how you can embed privacy into virtually any system or operation to achieve positive-sum outcomes, enabling both privacy and data utility – not one at the expense of the other.

## NBiS-2017 & INCoS-2017 Keynote II

**Prof. Shahrokh Valaee, University of Toronto, Canada**

### **Cooperative Self-driving Vehicles**

**Abstract:** Can autonomous driving fully replace the driver with a smart control system? We are witnessing the emergence of Self-Driving Vehicles, which intend to be an assistant to, or completely replace the driver. Unfortunately, we also hear about accidents that such autonomous vehicles are involved in. In this talk, we will show that autonomous driving will indeed be the start of a new chapter for automobiles that will pave the path for the more advanced Connected Car technology. Despite much progress in manufacturing sophisticated vehicles, the communication methods among drivers on roads are still primitive, through visual contact. Autonomous driving addresses some of these issues by using advance sensing to enhance safety. However, sensing quickly loses its effectiveness in high speeds, severe weather conditions, and non-line-of-sight. This talk will explore the need for communication in smart vehicles and discusses the research challenges. We will investigate both the WiFi and 5G cellular technologies and study their role in cooperative self-driving vehicles.
